

# Pneumatic Tube Systems for Quarries, Silo Loading Stations or Heavy Goods Vehicle Gatehouses

**DANGER ZONE**

**OFFICE**

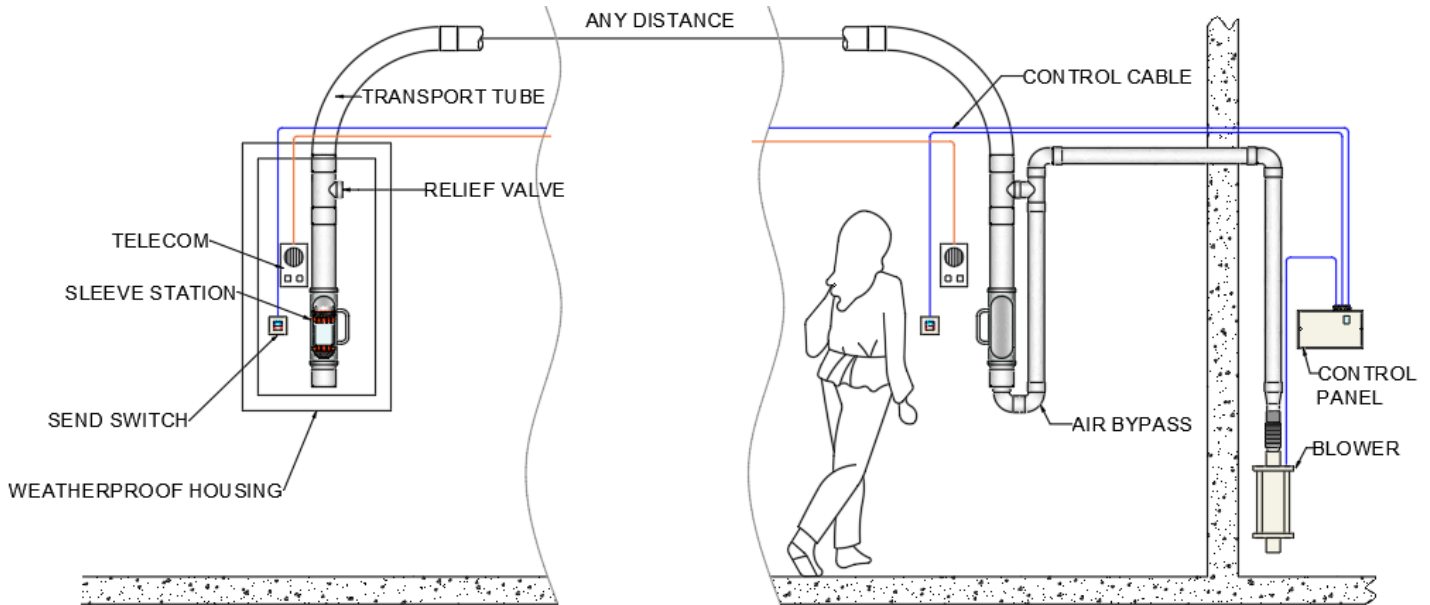

**HGV loading operations or deliveries to and from sites supplying raw materials may pose several risks to both the HGV driver and the gatehouse security, when exchanging the order documents or delivery notes.**

- The driver must stop the engine when leaving the vehicle
- The driver or security may have to cross multiple access roads
- The road surface may be muddy and slippery
- There may be overhead loading activities
- Traffic flow and delivery/pickup turnover may be slowed down

***These hazards and associated risks can be eliminated by simply installing a dedicated aerocom pneumatic air tube link and intercom from the driver's window of the truck directly to the gatehouse security office.***

With a basic intercom and weatherproof air tube station conveniently mounted at optimum access to the driver's window, communications and document exchanges are made in seconds using air tube carriers.

**Dependant on distance and local requirement or building arrangements we have a choice of:**

- Various tube diameters from  $\varnothing 63\text{mm}$ ,  $\varnothing 90\text{mm}$ ,  $\varnothing 110\text{mm}$ , or  $\varnothing 160\text{mm}$
- Tube can be routed internally, externally or even underground
- A choice of stations, intercoms, carriers and accessories
- Blowers can be single phase or 3-phase in various volume capacities
- Control systems range from simple to sophisticated

**For a free site survey and estimate, please do not hesitate to contact us;**
